

REVEG ORGANIC BLANKET

(R.O.B)

WHAT IS IT?

REVEG ORGANIC BLANKET (R.O.B) is a pneumatically applied compost blanket that is designed to reduce erosion and sediment flow from disturbed sites.

Photo: R.O.B being applied by the 'Reveg Express Bark Blower'.

The application of Reveg Organic Blankets ensures close ground contact, as it readily absorbs any moisture, helping reduce the likelihood of sheet and rill erosion occurring.

'Being an organic based product, Reveg Organic Blankets are extremely rich in nutrients and requires minimal maintenance as it readily integrates itself back into the environment'.

Reveg Organic Blankets are specifically tailored for different terrain i.e. flat or sloped areas and applied accordingly in order to provide the best results. This particular technique is unique due to its incredible ability to mimic a natural growing environment. For permanent sites seed introduction within the application is highly recommended as the mat promotes successful germination and plant establishment.

WHAT ARE THE KEY BENEFITS?

- Rich in organic matter and nutrients;
- Environmentally friendly technique;
- Low installation and maintenance costs;
- Eliminates weeds and other unwanted materials, which are usually found in top soils; and
- Mimics a natural environment, allowing seed and plants to thrive.
